#### **Value Effects of Regulatory Restrictions**

## **Tightened Sharing Bands:**

Current plan vs. 12.25% to 13.25% sharing range (with addback):

- Reduces Value by \$1.1B to \$1.4B (7% to 9% loss in value)
- Based on industry average performance

### 1% Increase in Productivity Offset:

Increasing the productivity offset by 1%:

- Reduces Value by approx. \$1.2B (7% loss in value)
- Value calculation above only considers 5 years. Effect compounds geometrically each year.

#### "Per-Line" Common Line Treatment:

Revise Common Line Price Cap Formula to "Per-Line" Treatment:

- Reduces Value by approx. \$1B (6% loss in value)
- Effects compound geometrically, like productivity offset.
- Equivalent to 0.7% to 0.8% increase in productivity offset.

### **Up-Front Reductions in Price Caps:**

- A 1% Reduction on Price Cap Indexes:
- Reduces Value by approx. \$0.5B (3% loss in value)

A 3% Reduction on Price Cap Indexes:

• Reduces Value by approx. \$1.4B (9% loss in value)

Notes: Values based on NPV of LEC Net Income over 1995-1999 (5 years). The value of each variable noted above has been determined individually. These variables in combination interact, and are therefore not strictly additive.

The Honorable Reed Rundt Chairman Federal Communications Commission Weshington, D. C. 20554

Dear Mr. Chairman:

CWA has long been concerned about the stability of employment in the telecommunications industry. Our members are eager to and deserve to be involved in the construction of the information highway of the future. In order for this to occur, the local exchange companies need a regulatory process that is sore in line with competitive pressures and provides the right incentives for large capital expenditures. It is for this reason that we support the USTA plan filed in the Price Cap proceeding.

During the past several years, the Commission has taken strong action to encourage interstate access services to new competitors. Today, competitive access providers, cable companies, interexchange carriers and others have entered and are continuing to enter the business, thus providing alternatives to the local exchange carriers. We are also seeing local exchange parties investing in interexchange access providers outside of their own service territories.

It is a fact that the long haul part of the interstate telecommunications system already has transnous capacity. We now have the task of attracting capital for the construction of the tens of thousands of miles of local facilities that require technological upgrading as well as the need to increase capacity. It is our judgment that the Price Cap plan can help provide the incentives for investment by the local Exchange Carriers and thereby create many new employment opportunities for union workers. As you are swars, when the construction of these local "off ramps" is done by the vast majority of the cable companies or the CAPs, there are few union jobs involved. What is generally involved is a low wage contingent workforce.

By changing the Price Cap plan in line with the proposed alternative, we balisve the skilled union workforce will have a much better chance to participate in the business of the future.

Changes in the way the FCC regulates local exchange carrier depreciation are also critical. The present system unfairly discriminates against local carriers in favor of dable companies, CAPs and interexchange carriers.

Please give serious consideration to our views on this issue. CMA members' future participation in the information age infrastructure is closely tied to the future health of the local exchange industry. This is an opportunity to make a real impact for those workers who helped build the best telecommunications industry in the world.

Sincerely,

Morton Behr President
